

NetDimensions Enterprise Knowledge Platform

A powerful multilingual learning management system, the Enterprise Knowledge Platform (EKP) has been chosen by Cathay Pacific Airways, South Africa Telkom, HSBC, ING, ABN AMRO and other leading multinationals.

It is becoming more common for a Learning Management System (LMS) to be integrated into all aspects of the business rather than the more traditional LMS environment. An LMS is no longer used only to implement an organization's learning development but also to measure and report on training delivery, ensure regulatory compliance, automate reporting and tracking, as well as deliver assessment and testing.

The NetDimensions Enterprise Knowledge Platform (EKP) LMS is quick to implement, reliable, robust and secure. EKP gives managers and administrators unprecedented control over the learning, training and development process.

It loads, launches, tracks and manages AICC- and SCORM-compliant courses and supports bulk and individual user registration. With the most multi-language support than any other LMS on the market, EKP has the tools to manage training programs, compliance initiatives, performance appraisals, license and certification requirements, competencies and succession planning.

Organizations can implement EKP for:

- Web-Based / Online Training
- Information / Documentation Management
- Assessments & Regulatory Compliance
- Certification & Licensing Programs
- Human Resource Management
- eCommerce Management

Benefits of EKP:

- Automated reporting and tracking
- Standardized procedures
- Centralized global knowledge into one system
- Increased organizational interaction and exchange of knowledge
- Tracked regulatory compliance
- Access, monitor, review and update materials anytime, anywhere 24/7
- Integrated management of your entire training process

Advantages of EKP:

Quick To Implement

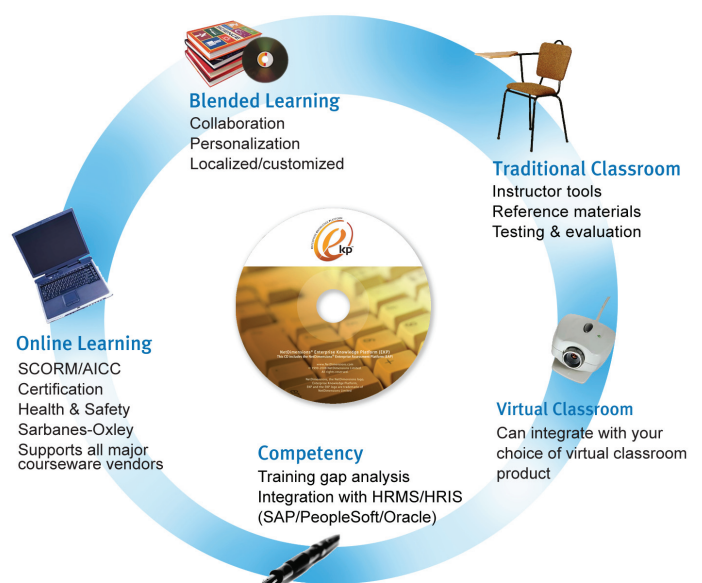

With a difference of weeks instead of months and in some cases days, our learning management system can be deployed faster and with fewer implementation services.

Security

EKP security is superior to most leading LMS's where all transactions must pass through the Security Manager before being processed by backend business components. So it makes it possible to identify all requests by specific users of the system.

Customization

EKP is designed with change in mind, which reduces the risk, time and cost of fulfilling customization requirements. EKP's component approach allows new releases to incorporate customized components, thus ensuring an upgrade path for customized systems.

Key Features of EKP

The **Portal Toolkit** stores information in one place, allowing an organization to use and share it globally and securely. Critical or updated information such as documents, images and reports can be disseminated frequently to employees using the Portal Toolkit, which is a single point of access that offers interaction and collaboration among users.

The **Enrollment Policy Editor** can set up and manage complex registration procedures and create skills assessments, as well as certification programs.

Global message broadcasting, course catalog management, Knowledge Centers, data archiving functions, cost accounting, as well as comprehensive reporting capabilities on EKP will simplify day-to-day management.

The extensive **Catalog Explorer** allows maximized flexibility and sophistication in organizing and managing content, simplifying searching and navigation as well as facilitating a hierarchical tree-orientated structuring of content.

With **Learning Object Versioning**, you can store multiple versions of a single object, as well as track and report on specific versions of the object.

Additionally, with EKP's **Learning Path** display functionality, you can present graphical layout of training plans, courses and objects as well as procedures and compliance initiatives.

These are only some of the EKP features designed to help clients achieve cost savings, educate extended enterprise value chains (supplier, partner and consumer), improve workforce productivity and maintain staff and agent compliance with various regulatory requirements in relation to training and communications.

Contact us to find out how EKP can simplify the management of your organizations' performance, knowledge and learning initiatives.
